

PROFESSIONAL PORTFOLIO

Maruthi Reddy O

Senior Software Developer

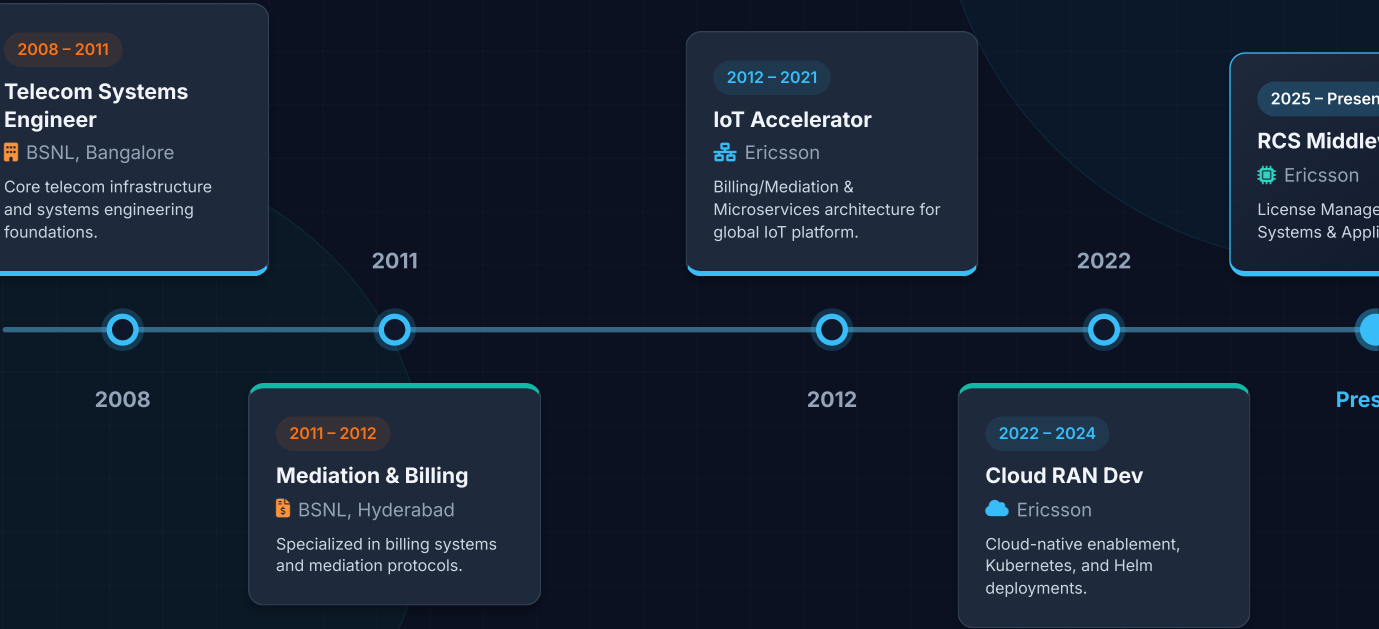

Telecom Systems & Applied AI | 15+ Years Experience

📍 Stockholm, Sweden

Professional Journey

Career Progression (2008 – Present)

Technical Skills Map

Core Competencies & Expertise

AI & Data

- Applied AI
- Agentic Systems
- On-device Agents
- Edge AI
- Embeddings
- LLMs

Programming

- Erlang
- Python
- PL/SQL
- C/C++
- Java
- Shell/Bash

Cloud & DevOps

- Kubernetes
- Helm
- Microservices
- CI/CD
- Git
- Jenkins

Telecom Domain

- Billing
- Mediation
- Cloud RAN
- License Management
- CDR Processing

Key Achievements & Impact

★ Major milestones and professional contributions

15+ Years

Telecom Systems

Extensive experience building robust, large-scale telecom architectures across multiple domains.

Billions

CDRs Processed

Designed systems processing billions of Call Detail Records monthly with high throughput.

Pipeline

CI/CD Leadership

Led the implementation of automated pipelines using Jenkins & Git for streamlined delivery.

Cloud Native

K8s Deployment

Successfully deployed microservices architectures using Kubernetes & Helm charts.

Migration

Legacy to Erlang

Migrated critical legacy C codebase to Erlang, significantly improving system reliability.

Leadership

Cross-Functional

Led cross-functional teams in complex billing initiatives, driving project success.

Certifications & Education

Academic Background & Professional Credentials

Bachelor of Technology (B.Tech)

Electronics & Communications Engineering • VIT University

2018

PROFESSIONAL CERTIFICATIONS

Applied Data Science Training

Ericsson

Fundamentals of Applied AI (FAA)

Ericsson

Cloud Native Operations

Ericsson

TM Forum Certifications

Frameworkx, eTOM, SID

TCS SAFA Certification

Tata Consultancy Services

Blockchain Technology

BTH Karlskrona

CURRENT MISSION

 Ericsson

License Management
Developer

RCS Middleware

● Active Role

Vision & Focus Areas

Driving innovation at the intersection of Telecommunications and Artificial Intelligence through strategic technology initiatives.

Applied AI & Agentic Systems
Developing autonomous agents that optimize network functions through intelligent decision-making.

On-device & Edge
Pushing intelligence to network edge for lower latency and enhanced privacy.

Policy-Driven Automation
Implementing rule-based systems that automatically adjust to network conditions.

Hybrid Cloud-Edge
Architecting seamless integration between cloud resources and edge nodes.

AI-Assisted Operations
Enhancing system observability and operational efficiency using predictive models to preemptively identify issues.
